

Basic Clinical Training (BCT)

Rotation Assignment

ACGME Core Competencies

Patient Care

Medical Knowledge

Practice-based learning and improvement

Interpersonal and communication skills

Professionalism

Systems-based practice

During the month, select a patient with at one common comorbid disease and describe their anesthetic management.

Organize your write-up as follows:

A. Comorbidity

B. Briefly summarize the case. Describe the anesthetic management, with emphasis on tailoring the anesthetic management to the disease state.

C. Describe the pathophysiology of the comorbidity

D. Give an overview of the anesthetic considerations for the comorbidity, organized according to the following headings:

Preoperative evaluation (H&P, ancillary testing, medical optimization)

Premedication

Anesthetic Technique (MAC v GA v Regional)

Induction

Airway management

Maintenance

Intraoperative considerations

Emergence

Post-operative considerations

E. Critical appraisal of anesthetic management. How could the patient's care been improved?

Submit a copy of the anesthetic record with the assignment prior to the end of the rotation.
